NATIONALITY: INDIAN

MARITAL STATUS: SINGLE

NOTICE PERIOD: IMMEDIATE JOINER

01 PROFESSIONAL SUMMARY

Technology leader with 9+ years of corporate experience building and delivering enterprise-scale digital banking, mobile, and web platforms across Malaysia, India, Thailand, Jordan, Lebanon, Saudi Arabia, and Qatar – spanning direct banking, consulting technical leadership, and entrepreneurship as the founder of an AI product. Career combines hands-on full-stack engineering, technical leadership of delivery teams, solution design, architecture review, and direct stakeholder ownership across the full SDLC.

Currently building two products end to end: an enterprise API gateway and integration management platform, and a Banking Copilot AI Agent – covering agent orchestration, retrieval-augmented generation (RAG), MCP (Model Context Protocol)-based tool integration, LLM API integration with Claude and OpenAI, and foundation-model evaluation on AWS Bedrock. This work combines nine years of regulated-industry engineering discipline with modern agentic AI architecture.

Target roles: AI Solution Engineer, AI Lead, and AI Product Lead – focused on designing and delivering AI systems within real-world enterprise constraints, including legacy core-system integration, security and compliance, release governance, and multi-country stakeholder delivery. **Core stack:** Python, Java, Spring Boot, ReactJS, Flutter, microservices, REST APIs, AWS, Temenos Infinity, LLM APIs, RAG, MCP, and agentic AI architectures.

02 CAREER HIGHLIGHTS

- **Specialised in design thinking – architecture design thinking from a product perspective:** starting from the user and the product outcome, then working back to the system that delivers it. Applied across banking channels, integration platforms and AI agents to decide what to build, where the boundaries sit, and what to leave out.
- Architecting and building an enterprise API gateway / integration management platform and a Banking Copilot AI Agent as founding engineer – agentic orchestration, RAG retrieval, MCP tool integration and LLM APIs, on Spring Boot, Kubernetes and AWS.
- Delivered digital banking platforms across seven countries in Asia and the Middle East over nine years.
- Direct banking employment as Technical Lead at RHB Bank Berhad, Malaysia – the bank's own Digital Banking Technology team, not a vendor seat.
- Trusted delivery for RHB Bank (Malaysia), Cedrus Bank (Lebanon), Arab Tunisian International Bank (Jordan), TMB Bank (Thailand), Bank Albilad (Saudi Arabia), BMW Japan and Evolution Mining (Australia).

- Led engineering teams of 10–15 across Malaysia, India, Thailand and the Middle East — task allocation, mentoring and performance guidance, architecture and code review, and ownership of release management and production stabilisation for mission-critical banking systems.
- Worked onsite with client stakeholders in Bangkok across two deployments (Nov–Dec 2017, Jun–Oct 2018) on a loan origination platform for Thailand Military Bank.

03 AI CAPABILITY

AGENTIC SYSTEMS

Agent orchestration and tool-calling loops · MCP (Model Context Protocol) servers and clients · function/tool schemas over internal services · multi-step task decomposition

RETRIEVAL & GROUNDING

RAG pipelines · document chunking and embedding · vector search and retrieval · grounded, source-cited responses · prompt design and iteration

MODEL PLATFORMS

AWS Bedrock foundation models · Anthropic Claude API · OpenAI API · model selection and cost/latency trade-offs

AI-ASSISTED ENGINEERING

Claude Code, GitHub Copilot and LLM tooling used across a production codebase · AI-assisted review, refactoring and test generation · rolling these practices out to teams

04 TECHNICAL SKILLS

AI & ML	Agentic AI · MCP · RAG · LLM APIs (Claude, OpenAI) · AWS Bedrock · prompt engineering · vector search · AI-assisted development (Claude Code, Copilot)
LANGUAGES	Python · Java · JavaScript · SQL · Dart
BACKEND	Spring Boot · Spring MVC · Microservices · REST API design · web services
FRONTEND	ReactJS · HTML5 · CSS3 · JavaScript
MOBILE	Flutter · Android SDK · iOS SDK · Temenos Infinity (Kony Visualizer 6–8.4) · Kony MobileFabric 7–8
CLOUD	AWS · AWS Bedrock · cloud-native application architecture · cloud adoption strategy · deployment strategy
DEVOPS	Docker · Git · Maven · Gradle · CI/CD · build and release management
DATABASES	Oracle · MySQL · SQL Server
ARCHITECTURE	Solution design · system integration · microservices architecture · distributed systems · architecture review
LEADERSHIP	Design thinking · architecture design thinking from a product perspective · technical leadership · team mentoring · stakeholder management · Agile / Scrum · SDLC · code review · release governance
DOMAIN	Retail & digital banking · payments and fund transfers · cards · loan origination and management · HRMS · supply chain · field service
TOOLS	Jira · Confluence · Postman · Git

05 PROFESSIONAL EXPERIENCE

Founder & Independent Technical Consultant — Self-funded AI Startup

NOV 2024 – PRESENT

Enterprise API Gateway / Integration Management Platform · Banking Copilot AI Agent · plus cloud and architecture advisory

engagements

- Building an Enterprise API Gateway and integration management platform — an enterprise control layer for routing, securing, versioning, transforming and observing APIs across backend systems, in the category of Kony / Temenos MobileFabric, MuleSoft and IBM API Connect. Java, Spring Boot, ReactJS and TypeScript on Docker and Kubernetes; an MCP tool layer for agentic consumers is the next phase.
- Building a Banking Copilot AI Agent — an agentic assistant for banking workflows, applying nine years of retail and digital banking domain knowledge to the agent's tool surface, guardrails and integration with core banking services.
- Built the agentic layer around tool-calling: the model reasons over a task, then invokes internal services through defined tool schemas and MCP (Model Context Protocol) servers rather than answering from context alone, so actions run against real systems and real data.
- Implemented a RAG pipeline over domain documents and reference content — ingestion, chunking, embedding, vector retrieval and re-ranking — so responses are grounded in retrievable sources instead of model recall, with citations surfaced back to the user.
- Integrated Claude and OpenAI APIs and evaluated foundation models on AWS Bedrock, selecting models per task against accuracy, latency and cost, and building fallbacks for degraded or rate-limited paths.
- Run the entire codebase with AI-assisted development (Claude Code, GitHub Copilot) — generation, refactoring, review and test scaffolding — as a deliberate delivery-speed strategy for a single-engineer product.
- Advise organisations on cloud adoption, application architecture and technology roadmaps alongside the product work.

STACK Java · Spring Boot · Python · ReactJS · TypeScript · Docker · Kubernetes · Oracle · AWS · Agentic AI · MCP · RAG · Claude API · OpenAI API · AWS Bedrock

Technical Lead — Prema-C Consulting, Jordan

MAR 2024 – NOV 2024

Clients: Cedrus Bank (Lebanon) · Arab Tunisian International Bank (Jordan) — Enterprise Digital Banking Platform

- Led end-to-end delivery of enterprise digital banking solutions for two Middle East banks, guiding engineering teams through Agile delivery from requirement analysis to production release.
- Designed scalable application and integration architecture on Temenos Infinity with Spring Boot microservices and REST APIs against the banks' core systems.
- Ran architecture reviews and code-quality improvement cycles directly with banking stakeholders, translating regulatory and security requirements into engineering decisions.
- Owned deployment, release management and production stabilisation across environments, including post-release defect triage and hotfix coordination.

STACK Java · Spring Boot · ReactJS · AWS · Temenos Infinity · Microservices · REST APIs · Oracle · Git · Jira

Technical Lead — RHB Bank Berhad, Malaysia

APR 2023 – OCT 2023

Direct full-time bank employment · RHB Mobile Banking Platform, Digital Banking Technology

- Led development and enhancement of the bank's enterprise mobile and web banking platform as an in-house technical lead, owning modules for account management, fund transfers, bill payments, card services and loan management.
- Worked as a full-stack lead across Java, SQL and Temenos Infinity (Kony) middleware — designing forms and flows, building and configuring the web services behind them, and maintaining the MobileFabric service layer.
- Partnered with product owners, business teams and enterprise architects to convert business requirements into technical designs, use-case documentation and delivery-ready user stories.

- Managed build deployment, release planning and production support for a platform serving retail customers under bank security and availability standards.

STACK Java · Spring Boot · ReactJS · Microservices · Temenos Infinity (Visualizer 8.4) · MobileFabric 8 · Oracle · REST APIs

Technical Lead — Accord Innovations, Malaysia

JAN 2022 – APR 2023

Client: RHB Bank Berhad (Malaysia) — Digital Banking Platform

- Led development of enterprise digital banking applications for RHB as the client-side technical lead, covering design, implementation and release for retail banking modules.
- Mentored developers and raised Agile engineering practice on the team — code review standards, branching and merge discipline, and defect prevention.
- Coordinated requirement gathering directly with the client and turned it into module-level design and delivery plans.
- Owned build deployment, release management and production release support.

STACK Java · SQL · Temenos Infinity (Kony) · Kony MobileFabric · REST APIs · Oracle

Technical Lead — HCL Technologies, Malaysia

SEP 2020 – OCT 2021

Client: RHB Bank Berhad (Malaysia) — Digital Banking Platform

- Designed enterprise mobile banking applications and the backend REST services behind them, using Spring Boot and a microservices approach.
- Participated in design reviews with client architects, contributing to service decomposition and integration decisions.
- Ran release management and build deployment activities, and supported production incidents through to resolution.

STACK Java · Spring Boot · Microservices · Temenos Infinity (Kony) · MobileFabric · SQL · REST APIs

Senior Software Engineer — Synergy Login Systems, Malaysia

SEP 2019 – AUG 2020

Deployed to HCL Technologies · End client: RHB Bank Berhad — Digital Banking Platform

- Developed enterprise banking application modules in Temenos Infinity (Kony) and Java as a full-stack developer on the RHB mobile banking programme.
- Built reusable UI components and shared service integrations used across banking modules.
- Supported deployments and production issues, working with the client team on root-cause analysis and fixes.

STACK Java · SQL · Temenos Infinity (Kony Visualizer) · Kony MobileFabric

Software Engineer — Kony India Pvt. Ltd., Hyderabad

OCT 2017 – AUG 2019

Onsite: Thailand Military Bank (TMB), Bangkok — Loan Origination Platform · Bank Albilad, Saudi Arabia — Retail Banking

- Built Android and iOS banking applications on Temenos Infinity (Kony Visualizer), implementing REST integrations, backend services and push notifications.
- Led a team of four engineers and held responsibility for project releases, coordinating between offshore development and onsite client teams.
- Worked onsite in Bangkok with TMB stakeholders across two deployments (Nov–Dec 2017 and Jun–Oct 2018) on requirement gathering, delivery and production support at the client site.
- Proposed and built an in-app chatbot inside the TMB loan origination system in Python and Java — an unprompted initiative taken through to a delivered feature.

- Executed the platform migration of a live project from Kony Visualizer 7.2.1 to 8.1, including regression across supported platforms.

STACK Java · Python · SQL · Temenos Infinity (Visualizer 8.1 / 8.2) · MobileFabric 8 · Android · iOS · REST APIs

Software Engineer — Accion Labs, Hyderabad

MAR 2017 – OCT 2017

Deployed to Kony India · Client projects: BMW Japan · Evolution Mining, Australia

- Developed enterprise mobile and desktop-web applications in Java and Temenos Infinity for two international clients.
- Built REST services, JSON contracts and MobileFabric object/integration services, including offline database sync for a field-service application.
- Worked across offshore and client teams on requirements, delivery and debugging.

STACK Java · Temenos Infinity (Visualizer 7.2 / 8.2) · MobileFabric 7.3 / 8 · REST · JSON

Junior Software Engineer — Truetech Solutions, Chennai

JUN 2015 – FEB 2017

Clients: Ultratech Cements (Aditya Birla Group) · Ministry of Public Health, Qatar

- Developed Android and enterprise applications for HRMS and supply-chain solutions using native Android and Java.
- Managed a team of five and held responsibility for product development on the sales-force automation product.
- Integrated backend APIs, formulated web services and JSON contracts, and coordinated customer requirements directly.
- Shipped weekly releases to clients under an Agile delivery model; worked onsite Dec 2015 – Feb 2016.
- **Proposed and built iATM** — a cardless ATM cash withdrawal proof of concept, delivered as a cross-platform mobile app with a Java and MySQL backend.

STACK Java · Android SDK · Kony Studio 6 / 6.5 · Kony Visualizer 7 · Kony Middleware · REST · JSON

Software Engineering Intern — Digient Technologies, Chennai

DEC 2014 – JUN 2015

Project: Poker Game AI Automation — first AI work

- Built automation for a Texas Hold'em poker AI bot, covering game-play logic and automated decision flows — an early, hands-on introduction to machine decision-making under uncertainty.
- Played a lead role in design and development of the bot's decision layer.

Detailed breakdown of the most significant engagements, in reverse chronological order.

A · Enterprise API Gateway & Integration Management Platform		NOV 2024 - PRESENT
Founder & Solution Architect · Self-funded startup · India / remote · Domain: Enterprise Integration & API Management		
DESCRIPTION	An enterprise API gateway and integration management platform — the same category as Kony / Temenos MobileFabric, MuleSoft and IBM API Connect + Integration. It gives an organisation a single control layer between its client applications and its backend systems: services are registered, secured, versioned and observed in one place, and backend integrations are configured centrally rather than hand-coded into every consuming application. Built from direct experience of the problem — eight years delivering banking channels on top of MobileFabric, where the integration layer is what decides how fast a bank can ship.	
PLATFORM	Java · Spring Boot · Docker · Kubernetes · ReactJS · TypeScript · Oracle	
CAPABILITIES	API gateway — routing, authentication and authorisation, rate limiting and throttling, request/response transformation, API versioning and lifecycle management · integration services — connectors to backend systems, orchestration of multi-service calls, protocol and payload mapping across REST, SOAP and database sources · identity and session management · a service registry and catalogue for consuming applications · observability — call logging, tracing, error analytics and an audit trail · an administration and developer console for onboarding services, configuring policy and inspecting live traffic.	
ARCHITECTURE	Spring Boot microservices behind a gateway edge · configuration-driven integration definitions persisted in Oracle, so onboarding a new backend service is a configuration change rather than a code release · ReactJS and TypeScript administration console · containerised with Docker and orchestrated on Kubernetes for horizontal scale and rolling deployment.	
RESPONSIBILITIES	• Product and solution architecture: defined the gateway boundary, the service contract model, and the policy and configuration schema. • Built the gateway edge and the integration service layer in Java and Spring Boot, including transformation and orchestration of backend calls. • Designed the configuration-driven onboarding model so integrations are declared, versioned and promoted across environments without redeployment. • Built the ReactJS / TypeScript administration console for service registration, policy configuration and traffic inspection. • Containerised the platform with Docker and deployed on Kubernetes; own the full build and deployment path. • Used AI-assisted development (Claude Code, Copilot) across the codebase as the delivery model for a solo build.	
ROADMAP	The next phase adds an AI layer on top of the gateway: exposing registered services to models as typed, governed tools through MCP (Model Context Protocol), so agentic applications — including the Banking Copilot AI Agent — reach enterprise systems through the same policy, audit and observability controls that already govern API traffic.	
STATUS	BETA Core gateway and integration services running; administration console and policy management in active development.	

B · Banking Copilot AI Agent

NOV 2024 – PRESENT

Founder & Solution Architect · Self-funded startup · India / remote · Domain: Banking & AI

CONCEPT	A copilot for banking that runs the end-to-end banking process through chat. The customer or banker states an intent in conversation; the agent interprets it, holds the context of the task across turns, and drives the underlying banking systems to completion – so a journey that today means navigating several screens or channels becomes a single conversation.
APPROACH	The agent sits between the user and the bank's systems rather than beside them: it decomposes a request into steps, calls the banking services it needs as governed tools, confirms with the user where a decision or authorisation is required, and reports the outcome. Retrieval grounds it in product, policy and account context so answers are sourced rather than recalled.
AI STACK	Agentic orchestration and tool-calling · MCP (Model Context Protocol) · RAG with embeddings and vector search · Anthropic Claude API · OpenAI API · AWS Bedrock foundation models · Python.
PLATFORM	Java · Spring Boot · Python · ReactJS · Docker · Kubernetes · Oracle · AWS. Reaches banking services through the Enterprise API Gateway platform above.
RESPONSIBILITIES	- Defined the concept and the agent's boundary – which banking actions it may execute, which require human authorisation, and what it must never do unattended. - Designed the tool surface over banking services, drawing on nine years of retail and digital banking delivery to model the real process rather than a demo path. - Built the orchestration and retrieval layers, model routing across providers, and the conversational front end. - Applied banking-grade thinking to guardrails, auditability and failure handling from the start, rather than retrofitting them.
STATUS	IN DEVELOPMENT Agent orchestration and tool layer being built on top of the gateway platform.

C · Cedrus Bank & ATIB – Enterprise Digital Banking

MAR 2024 – NOV 2024

Technical Lead · Prema-C Consulting · Cedrus Bank (Lebanon), Arab Tunisian International Bank (Jordan) · Domain: Digital Banking

DESCRIPTION	Enterprise digital banking platform delivery for two Middle East banks, built on Temenos Infinity with a Spring Boot microservices layer integrating to each bank's core systems.
STACK	Java · Spring Boot · ReactJS · AWS · Temenos Infinity · Microservices · REST APIs · Oracle · Git · Jira
RESPONSIBILITIES	- Led the engineering team through the full delivery cycle under Agile practice – sprint planning, estimation, review and retrospective. - Designed scalable application and integration architecture across the two client engagements. - Ran architecture reviews and code-quality improvement cycles with the banks' technical stakeholders. - Supported deployments and release management; drove production stabilisation after go-live. - Acted as the primary technical point of contact between the consulting team and both banks.

D · RHB Bank Mobile Banking Platform

SEP 2019 – OCT 2023

Technical Lead · RHB Bank Berhad, Kuala Lumpur, Malaysia · Domain: Retail & Digital Banking

DESCRIPTION	The retail banking mobile application for RHB Bank Berhad, Malaysia – account information, fund transfer, loan account management, quick pay, bill payments and card management for account
-------------	---

holders. A four-year continuous engagement on the same platform across Synergy Login Systems, HCL Technologies, Accord Innovations and finally direct employment with the bank.

PLATFORMS	iOS and Android · rich client
STACK	Kony Visualizer 8.4 · Kony MobileFabric 8 · Java · Spring Boot · ReactJS · Microservices · Oracle · REST APIs · Git · Jira
RESPONSIBILITIES	• Gathered requirements directly from the bank's business and product teams; prepared use-case documents and broke them into user stories for the delivery team. • Designed and implemented application forms and flows for both supported mobile platforms, and the data-presentation layer behind them. • Proposed and implemented enhancements that used native device capabilities to improve the customer experience. • Developed and implemented the web services layer; configured and maintained services in Kony MobileFabric. • Installed, configured and tested builds across devices and environments. • Owned release management and build deployment; supported production releases and live incidents. • As lead: reviewed code, mentored developers, and represented engineering in design and architecture discussions with the bank's architects; team of 10.

E · Bank Albilad — Retail Banking Mobile Application

JAN 2019 – AUG 2019

Software Engineer · Kony India · Bank Albilad, Saudi Arabia · Domain: Retail Banking

DESCRIPTION	Retail banking mobile application for Bank Albilad, Saudi Arabia — account information, money transfer, loan accounts, bill payments and card services for account holders.
PLATFORM	iOS and Android · rich client · Kony Visualizer 8.2 · Kony MobileFabric 8
RESPONSIBILITIES	• Gathered and analysed client requirements; prepared use-case documentation from user stories. • Designed and implemented forms for the required platforms and the widget-level data presentation. • Proposed enhancements using native device features. • Formulated web services; configured and accessed them through Kony MobileFabric. • Implemented Kony push notifications. • Installed, configured and tested application builds.

F · TMB SELOS — Small Enterprise Loan Origination System

MAY 2017 – DEC 2018

Software Engineer (team lead of 4) · Kony India · TMB Bank (Thailand Military Bank), Bangkok · Onsite Nov–Dec 2017, Jun–Oct 2018 · Domain: Banking / Lending

DESCRIPTION	TMB Bank's Small Enterprise Loan Origination System — the platform its Business Development Managers use to create and manage loan origination case files. Delivered as four connected workstreams.
ESKA	SELOS Phase 2. Moved the SE loan origination operating model toward full formula lending and data-driven decision models without compromising regulatory and compliance requirements. Delivered a digital self-service channel (mobile and internet banking) letting existing and

	prospective customers move from prescreen through to loan request on their own — making an automated loan application process possible without human interaction.
SMART BDM	A BDM-facing tool to improve customer enquiry experience and efficiency, particularly in customer screening: finds potential customers, screens them quickly against key criteria, and prepares the BDM for a visit — printing application documents, sharing the document checklist with the customer, and reviewing customer information before the meeting.
CHATBOT	Proposed a conversational assistant inside the loan origination application, and built it — an in-app chatbot in Python and Java that answered borrower and BDM queries within the origination flow instead of forcing a call to the branch. Proposed on my own initiative and taken through to a working, delivered feature.
MIGRATION	Migrated the project from Kony Visualizer 7.2.1 to 8.1 following the Visualizer 8 release, including regression across supported platforms.
PLATFORM	Android tablet · rich client (TMBtellmeknow) · Kony Visualizer 8.1 · Kony MobileFabric 8.1 · Java · Python
RESPONSIBILITIES	• Gathered requirements directly from the client in Bangkok and coordinated the offshore team against them. • Designed and implemented forms and the data-presentation layer for the supported platforms. • Formulated web services; configured and accessed services through Kony MobileFabric. • Implemented push notifications. • Installed, configured and tested Android builds; reviewed and debugged with the inline debugger. • Handled application delivery and production support onsite at the client premises. • Led a team of four engineers and held responsibility for the release.

G · iATM — Cardless ATM Cash Withdrawal

JUN 2015 – FEB 2017

Junior Software Engineer · Truetech Solutions, Chennai · Domain: Banking / Payments · Self-initiated proof of concept

DESCRIPTION	A mobile application for cardless cash withdrawal from an ATM — the customer authorises and initiates the withdrawal from their phone, and collects cash at the machine without a physical card. Proposed by me and built by me as a working proof of concept.
PLATFORM	Cross-platform mobile application · Java backend · MySQL
RESPONSIBILITIES	• Originated the idea and pitched it internally as a product concept. • Designed the end-to-end flow — customer authorisation on the phone, transaction handoff to the machine, and cash release. • Built the cross-platform mobile client, the Java backend services and the MySQL data layer. • Delivered a working proof of concept demonstrating the full withdrawal journey.

H · Poker Game AI Automation — first AI work

DEC 2014 – JUN 2015

Intern · Digient Technologies, Chennai · Domain: Gaming AI

DESCRIPTION	Automation for a Texas Hold'em poker AI bot — game-play logic and automated decision flows, so the bot could evaluate a hand state and act without human input. First hands-on work with machine decision-making under uncertainty.
PLATFORM	Java · Servlets

ROLE Played a lead role in the design and development of the bot's decision layer.

EARLIER PROJECTS

BMW Japan · Mar–May 2017 · Kony India

Product information application delivering the latest BMW and Mini product data to dealers and internal employees. iPhone, Android and desktop web. Built the desktop admin portal, worked on MobileFabric object services, skins across phones and platforms, and web service / JSON contracts.

SCH — Ministry of Public Health, Doha, Qatar · Sep 2016 – Feb 2017 · Truetech

HRMS application for ministry employees to apply for and manage leave, loans and internal activities. iPhone and Android. Analysed requirements, developed UI forms, built web services, and shipped weekly Agile releases to the client.

EM Prestart — Evolution Mining, Australia · Mar 2017 · Kony India

Field-worker application for equipment and vehicle checks with daily status reporting to supervisors. iPhone, Android, desktop web and SPA. Implemented offline database sync operations and MobileFabric integration services.

SFA — Ultratech Cements, Aditya Birla Group · Jul 2015 – Aug 2016 · Truetech

Sales force automation application helping Ultratech sales executives communicate with and track dealers. Phone and tablet, iPhone and Android. Kony Studio 6 / 6.5 and Kony Middleware. Onsite Dec 2015 – Feb 2016; managed a team of five.

07 EDUCATION

Master of Computer Applications (MCA) — Jeppiaar Engineering College, Chennai, Tamil Nadu, India 2015

B.Sc. Computer Science — Arulmigu Kalasalingam College of Arts and Science, Virudhunagar, Tamil Nadu, India 2012

08 LANGUAGES

English · Tamil · Telugu
